

ICPC Internship Programme - Round 3 Assessment

Problem Statement

The National Manufacturing Mission, announced in the 2025-26 Union Budget, targets raising **manufacturing's share** of India's GDP from approximately **17% to 25% by 2035**, alongside the creation of **143 million** manufacturing jobs. Despite flagship initiatives like Make in India and Production-Linked Incentive schemes, India's manufacturing employment has stagnated while countries like Vietnam and Bangladesh have gained ground as competing destinations.

Choose any **ONE Indian state**. You are advising the Chief Minister's Office on a 5-year strategy to position your chosen state as a leading manufacturing and employment hub.

Your deck must be 5 slides. The following must be covered - how you structure and present them is your decision:

1. Current status of your chosen state's manufacturing sector, its share of GSDP, existing industrial corridors, employment data, and where it stands relative to India's top manufacturing states
2. At least one national or international comparison, benchmark your state against either a leading Indian manufacturing state or a competing country (Vietnam, Bangladesh, Indonesia) and identify what your state can learn or do differently
3. The specific policy interventions you propose, covering industrial policy, land, labour, logistics, skilling, or any other domain you consider critical, backed by data, not just assertions
4. The political and ground-level challenges to implementation, land acquisition resistance, environmental clearance bottlenecks, labour union dynamics, inter-state competition, or any other real-world friction your proposals will face
5. The economics of your proposal, estimated investment required, projected job creation, revenue impact, fiscal trade-offs, and a realistic implementation timeline with milestones
6. Reference to at least 2 relevant reports, policy documents, or credible research studies that inform your analysis (e.g., Economic Survey, NITI Aayog reports, RBI state-level data, Annual Survey of Industries, DPIIT data, or any credible institution's research)

Citations: Add the source of any report, data point, or study you reference as a small footnote directly at the bottom of the relevant slide, not compiled on a separate references page at the end.

Evaluation criteria: We are evaluating depth of research, quality of reasoning, and judgement, not presentation design.
